

Kas Integra Magazine and Folder Inserter **Automatic inserting into magazines or folders**

The Kas integra magazine inserter is a magazine inserting machine designed to insert a variety of documents into a magazine or folder cycling at up to 4000 filled items per hour. Different models are available depending on the size of the items into which the documents are being inserted ranging from 210 x 100 mm to up to 230 x 320 mm. The magazine feeder will feed up to 7mm thick, with the option to increase this to 10 mm. The standard insert stations handles items from 180 x 90 mm up to A4, with maximum thickness of 2mm.

Touch screen control of station selection and output speed the display screen provides run information and error location. This insert feeder has miss, double and jam detectors.

Output from the folder inserting machine can be delivered into an output conveyor stacker or an on line device can be added such as a polythene wrapper or envelope head.

The integra magazine inserter can be incorporated into an enveloping system from the Kas Mailmaster 465 range so that the filled book or folder can pass directly from one machine to another perhaps adding further inserts.

This magazine inserting machine can be used as a multiple feeder system for almost any polywrapper on the market whether one chooses the insert the material inside the magazine first or not.

There is an on line position to allow further equipment to be added upstream. For example a Kas Fast sheet feeder with reading facility may be required in order to select inserts before inserting into the book or folder.
